

# Multi-Cancer with CNV & RNA Fusion Panel

The **oncoReveal® Multi-Cancer with CNV & RNA Fusion Panel** is a combined DNA/RNA multi-cancer panel. The assay combines the DNA-based oncoReveal® Multi-Cancer v4 with CNV Panel with the oncoReveal® Multi-Cancer RNA Fusion v2 Panel allowing for joint sequencing. The panel uses proprietary Stem-Loop Inhibition-Mediated amplification (SLIMamp®) technology, a tiled amplicon-based library prep chemistry, designed by Pillar's AI-empowered VersaTile™ Primer Design tool, for efficient single-tube target enrichment.

## Expression Control Genes

HMBS TBP

### Simple NGS library prep workflow

Maintain control of samples and results with tiled amplification that can be performed in-house by any NGS lab

### Sensitive and robust chemistry

Achieve variant detection as low as 1% VAF<sup>†</sup> even with limited input or poor sample quality

### Reduced fully- loaded lab costs

Improve lab efficiency and reduce “no calls”, repeat testing, and difficult interpretation decisions
